Answer: D

QUESTION: 71

An enterprise company hires a management consultant, Mary Hunt, to improve corporate knowledge-management systems. The role requires her to be highly mobile within the enterprise as she gathers information from a variety of employees. When Mary is back at her desk, she must compare her new data with the data hosted on the corporate servers. After she logs in, the network recognizes her consultant status and allocates her the appropriate access rights. Which of the following enables this scenario?

- A. location-based services
- B. guest access
- C. enhanced security
- D. network admission control (NAC)

Answer: B
